

## Backup/Restore:

In the **"BackUp/Restore"** tab, we can manage the backups created of the database. We can both create our backup with the current data of the database and restore a backup that we select.

## Perform a Backup

Before making a backup, we must press the **"change path"** button and choose where we want the backup to be saved. If the backup creation was correct, the following message will be displayed and in the chosen path, we will find a file similar to the following.

## Restore Database:

To restore a previous database, we only have to press the "**Choose file**" button and select the .bak file we want to restore. If everything worked correctly, we will see the following message and the database will have returned to that restoration point.
